Weymouth Road Bridge Repair Project

The Weymouth Road Bridge is located over the NJ TRANSIT Atlantic City Rail line in Hammonton, Atlantic County. NJ TRANSIT has been assigned joint jurisdiction for maintenance of the bridge structure, while Atlantic County retains jurisdiction for maintenance of the roadway elements. New Jersey Department of Transportation (NJDOT) made a determination which required the bridge to be closed in late January 2026 until repairs can be completed. Before the closure, heavy truck traffic over the bridge had been repeatedly observed in violation of the bridge's posted load restrictions causing damage to the bridge.

Bridge Repair Work

- NJ TRANSIT is advancing approximately \$3 million in structural repairs
- Repairs include steel girder and decking work
- The structural design work is in the final approval phase
- Construction is expected to begin by the end of 2026

Local Detour Required

- NJ TRANSIT worked closely with local officials to develop the required detour
- Two detours were established as requested by local officials to keep heavy trucks off residential streets
- Detours were approved by NJDOT

The safety of the community is NJ TRANSIT's priority. NJ TRANSIT takes every precaution to ensure both passenger and public safety on our bus, rail, and light rail systems and on our transportation infrastructure. The bridge closure was necessary to prevent motor vehicle accidents and injuries from occurring. NJ TRANSIT recognizes the disruption to normal traffic patterns the bridge closure has caused and understands it has impacted businesses and residents. NJ TRANSIT shares the community's interest in restoring safe access to the bridge. NJ TRANSIT will continue to provide updates as the bridge repair project advances.
